## Answer Sheet Cell Transport Manipulative

### Beaker A:

This beaker contain a solution that is 25% solutes and 75% water. Cell membrane is permeable to both solutes and water, meaning that both are able to freely cross the cell membrane.

1. Beaker \_\_\_\_\_ % Solute, \_\_\_\_\_ % Water  
 Cell \_\_\_\_\_ % Solute, \_\_\_\_\_ % Water
2. The percent of water is higher in the (*beaker, cell, equal*)
3. The percent of solutes is higher in the (*beaker, cell, equal*)
4. The cell is in a (*hypertonic, hypotonic, isotonic*) solution.
5. Water will move (*into, out of, both*) the cell?
6. Solutes will move (*into, out of, both*) the cell?
7. Will the overall shape of the cell (*stay the same, increase, or decrease*)?
8. Display the correct new cell on your beaker.
9. Will (*diffusion, osmosis, or facilitated*) transport occur?

Original  
 \_\_\_\_\_ % Solute  
 \_\_\_\_\_ % Water

Draw cells  
 shape in beaker

Final

Draw cells  
 shape in beaker

### Beaker B:

This beaker contain a solution that is 16% solutes and 84% water. Cell membrane is permeable to both solutes and water, meaning that both are able to freely cross the cell membrane.

1. Beaker \_\_\_\_\_ % Solute, \_\_\_\_\_ % Water  
 Cell \_\_\_\_\_ % Solute, \_\_\_\_\_ % Water
2. The percent of water is higher in the (*beaker, cell, equal*)
3. The percent of solutes is higher in the (*beaker, cell, equal*)
4. The cell is in a (*hypertonic, hypotonic, isotonic*) solution.
5. Water will move (*into, out of, both*) the cell?
6. Solutes will move (*into, out of, both*) the cell?
7. Will the overall shape of the cell (*stay the same, increase, or decrease*)?
8. Display the correct new cell on your beaker.
9. Will (*diffusion, osmosis, or facilitated*) transport occur?

Original  
 \_\_\_\_\_ % Solute  
 \_\_\_\_\_ % Water

Draw cells  
 shape in beaker

Final

Draw cells  
 shape in beaker

### Beaker C:

This beaker contain a solution that is 45% solutes and 65% water. The cell membrane is **impermeable** to water. This means that only solutes can cross the cell membrane.

1. Beaker \_\_\_\_\_ % Solute, \_\_\_\_\_ % Water  
Cell \_\_\_\_\_ % Solute, \_\_\_\_\_ % Water
2. The percent of water is higher in the (*beaker, cell, equal*)
3. The percent of solutes is higher in the (*beaker, cell, equal*)
4. The cell is in a (*hypertonic, hypotonic, isotonic*) solution.
5. Water will move (*into, out of, neither*) the cell?
6. Solutes will move (*into, out of, neither*) the cell?
7. Will the overall shape of the cell (*stay the same, increase, or decrease*)?
8. Display the correct new cell on your beaker.
9. Will (*diffusion, osmosis, or facilitated*) transport occur?

Original  
\_\_\_\_ % Solute  
\_\_\_\_ % Water

Draw cells  
shape in beaker

Final

Draw cells  
shape in beaker

### Beaker D:

This beaker contain a solution that is 16% solutes and 84% water. The cell membrane is **impermeable** to solutes. This means that only water can cross the cell membrane.

1. Beaker \_\_\_\_\_ % Solute, \_\_\_\_\_ % Water  
Cell \_\_\_\_\_ % Solute, \_\_\_\_\_ % Water
2. The percent of water is higher in the (*beaker, cell, equal*)
3. The percent of solutes is higher in the (*beaker, cell, equal*)
4. The cell is in a (*hypertonic, hypotonic, isotonic*) solution.
5. Water will move (*into, out of, neither*) the cell?
6. Solutes will move (*into, out of, neither*) the cell?
7. Will the overall shape of the cell (*stay the same, increase, or decrease*)?
8. Display the correct new cell on your beaker.
9. Will (*diffusion, osmosis, or facilitated*) transport occur?

Original  
\_\_\_\_ % Solute  
\_\_\_\_ % Water

Draw cell shape  
in beaker

Final

Draw cells  
shape in beaker
